Professional Summary

Senior Software Engineer and Software Architect with 9+ years of experience delivering scalable, secure and distributed platforms across travel technology, FinTech, payments and stock brokerage. Experienced in Java/Spring Boot, Node.js/TypeScript, PHP/Symfony/Laravel, Go, PostgreSQL, MongoDB, AWS, Docker and Kubernetes, with strong expertise in microservices, cloud architecture, SSO, PCI-related payment integrations and ISO8583/EMV payment systems. Proven technical leadership across architecture, security, platform modernisation, operational support, CI/CD, engineering productivity and AI-assisted development.

Technical Skills

Languages: Java, TypeScript, JavaScript, Go, PHP, C#, SQL
Backend: Spring Boot, Node.js, NestJS, Laravel, Symfony, Slim, Zend
Architecture: Microservices, distributed systems, event-driven systems, REST/OpenAPI, system design
Cloud/DevOps: AWS, Kubernetes, Docker, Azure DevOps, Jenkins, CI/CD, Linux, serverless
Databases: PostgreSQL, MySQL, MongoDB, SQL Server, DynamoDB
Security: OAuth2, SSO, Microsoft Entra, API security, dependency/vulnerability management
Payments: PCI Proxy, payment tokenisation, Worldpay, ISO8583, EMV, NIBSS, Interswitch, UPSL, payment processing, settlement and reconciliation
AI/Automation: LLM integration, GitHub Copilot, n8n, Power Automate, AI-assisted development

Professional Experience

Senior Software Engineer / Software Architect **Jun 2023 – Present**
Holiday Taxis Group, Brighton, UK

- **Architecture & Technical Leadership:** Led architecture and technical design across 10 enterprise applications, translating business requirements into scalable, secure and maintainable solutions while guiding 12 engineers through architecture decisions, code reviews, engineering standards and roadmaps.
- **Enterprise Identity / SSO:** Delivered and finalised Microsoft Entra Single Sign-On across 6 applications, supporting 5,000+ users and centralising authentication and access management.
- **Payment Security & Compliance:** Led planning and implementation of the Amadeus PCI Proxy solution for invoice and card-payment processing, strengthening payment security and supporting compliance requirements.
- **Booking-Flow Documentation:** Updated Hotelbeds and Amadeus PCI booking-flow documentation to align with security and integration requirements.
- **Platform Modernisation:** Led planning and development of Platypus to drive application upgrades to PHP 8.5, improving security, maintainability and performance while adopting stricter language standards.
- **Security Engineering:** Conducted architecture, dependency and security reviews across 18 repositories, remediating 60+ vulnerabilities and introducing automated security validation into the software delivery lifecycle.
- **Patch & Dependency Management:** Established continuous patch and dependency management across 18 applications, contributing to a 40% reduction in dependency-related issues.
- **CI/CD & Cloud Optimisation:** Optimised serverless deployment and CI/CD processes, reducing deployment time by approximately 60% and supporting 10–30 production deployments per month.
- **Change Request Services:** Partnered with Business Analysts and stakeholders to design and deliver Change Request Services, translating business requirements into technical solutions that improve system capabilities and business processes.
- **Operational Support:** Resolved production incidents, delivered hotfixes and handled BAU tickets to support business continuity; responded to urgent customer and business requests to minimise operational disruption.
- **Business Reporting:** Developed and executed custom scripts and reports to provide business insights and support decision-making.
- **AI-Assisted Engineering & Automation:** Introduced AI-assisted engineering practices across 12 engineers, achieving approximately 50% faster technical documentation; designed two n8n/Power Automate workflows saving approximately 10 hours of manual effort per week.
- **Travel Technology:** Worked on booking and hotel-search workflows, including performance-focused processing, search optimisation and booking-queue/error-handling processes.

Software Developer (Backend) **Jul 2022 – Jun 2023**
Afrinvest West Africa Ltd, Lagos, Nigeria

- **Brokerage Platform:** Designed and developed backend services for a stock brokerage platform supporting approximately 200,000 users, delivering four services for client management, brokerage operations and transaction workflows within the Zanibal financial-services ecosystem.
- **Zero-Downtime Migration:** Designed and executed migration of 200,000+ user records from PHP/MySQL to Laravel/MySQL using batch processing and temporary staging tables, completing the migration in under six hours.
- **Real-Time Order Book:** Designed and developed a real-time order-book processing module handling approximately 600 market/order events per minute with sub-800ms latency.
- **Event-Driven Processing:** Implemented socket-based, event-driven processing and backend APIs to deliver real-time order-book updates to approximately 1,000 users and support brokerage and transaction operations.

Professional Experience (continued)

Software Developer (Backend) / DevOps Engineer **Jun 2018 – Jul 2022**
ITEX Integrated System, Lagos, Nigeria

- **Payment Platforms:** Led backend engineering for POS and payment platforms supporting 100,000+ terminals and approximately 1.2 million transactions daily, covering transaction processing, merchant management, settlement and reconciliation.
- **Backend Services & APIs:** Designed and implemented five backend services and 150+ REST APIs, contributing approximately 80% of backend implementation across core payment services.
- **ISO8583 Payments:** Engineered ISO8583 integrations with NIBSS, UPSL and Interswitch, implementing 0200/0210, 0400/0410 and 0800/0810 transaction flows.
- **DevOps:** Implemented Docker and Azure DevOps CI/CD across 20 services, reducing deployment time from 35 to 10 minutes while managing 12 Linux production servers across AWS and Linode.
- **Reliability & Incident Response:** Improved platform reliability from 85% to 92.9% and reduced third-party API outage resolution/support effort by approximately 50% through improved monitoring, troubleshooting and incident response.

Software (Web) Developer **Aug 2017 – May 2018**
Silveredge Projects

- **Real-Time Monitoring Platform:** Developed an Angular-based real-time power-monitoring platform covering 50+ power stations and generating sets, with 30-second data updates, analytics and forecasting capabilities for approximately 200 users.

Software Developer **Aug 2016 – Jan 2017**
Jeman Consulting

- **Web Applications:** Developed Laravel-based e-learning and gamified PMP platforms supporting approximately 500 users, including a Facebook chatbot used by approximately 400 users and a 550-question exam-preparation system.

Tools & Technologies: PHP, Laravel, MySQL, JavaScript, Facebook Messenger API, REST APIs, HTML, CSS

Selected Projects

- **Enterprise SSO and Access Management:** Microsoft Entra SSO across six applications.
- **Amadeus PCI Proxy / Secure Payment Flow:** Invoice and card-payment processing integration.
- **Platypus PHP Platform Modernisation:** Application upgrade planning to PHP 8.5.
- **Real-Time Brokerage and Order Book:** Event-driven brokerage workflows and real-time order-book processing.
- **High-Volume POS and ISO8583 Payments:** Payment processing, settlement and reconciliation integrations.
- **Real-Time Power Monitoring Platform:** Angular monitoring, analytics and forecasting for power stations and generating sets.

Education

B.Tech, Computer Science & Engineering 2017
Ladoke Akintola University of Technology, Nigeria

Core Strengths

Technical leadership and mentoring; software architecture and system design; microservices and distributed systems; secure software engineering; cloud scalability and serverless workloads; payment processing and PCI-related integrations; incident response and root-cause analysis; cross-functional communication; Agile delivery and engineering collaboration.

Additional Technical Experience

- **Architecture:** Enterprise application architecture, microservices, distributed/event-driven systems, API design and system design.
- **Cloud:** AWS, Kubernetes, Docker, Linux, serverless workloads and CI/CD automation.
- **Engineering Productivity:** AI-assisted development, technical documentation automation, workflow automation and engineering standards.
- **Security:** OAuth2, SSO, Microsoft Entra, API security, vulnerability remediation, dependency management and secure SDLC practices.
